

INDUSTRIAL DESIGN FABRICATION & INSTALLATION, INC

IDFI's sanitary design and construction

lowers maintenance costs

Increasing your **PAYBACK\$\$\$**

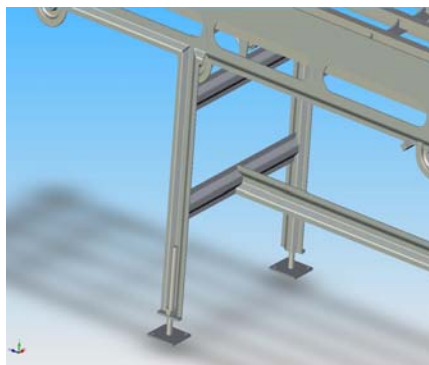

IDFI conveyors are designed to make cleaning easier, faster, and more accessible by eliminating all tubing, minimizing hard to clean inside corners, and having less surface area to clean. This will eliminate areas for bacteria to hide and grow, and ensure food safety for years to come. IDFI's goal with this design is to save your company money in cleaning cost, and by minimizing possible bacterial related liabilities for your Company.

The most critical consideration in sanitation problem prevention is conveyor design.

IDFI conveyors eliminate all tubing and reduce the number of bolted connections to an absolute minimum.

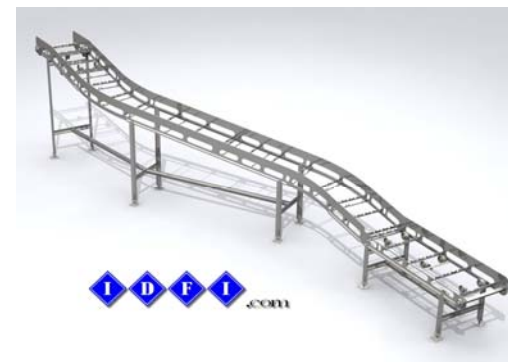

Name plates for all conveyors are engraved into the side of the drive panel. This will eliminate the name plates from falling off, and also eliminate bacteria growth behind the name plates.

IDFI conveyors are designed to make cleaning easier, faster, and more accessible by eliminating all tubing, minimizing hard to clean inside corners, having less surface area to clean. This will eliminate areas for bacteria to hide and grow, and to ensure food safety for years to come.

IDFI Conveyors
 Constructed with 304 Stainless Steel Frames
 Formed Legs and Supporting Structures
 Horizontal surfaces are minimized or eliminated
 Precision Laser Cut
 Reduce the Number of Welded Seams
 Reduce Warping and Cracking of Welded Areas
 Rounded Clean Out Holes for Easier Cleaning
